Connect people’s reasons to use the platform

A person should understand why another feature helps them—and choose whether to cross into it.

“I came here to teach. Why would I volunteer?”

START WITH A REAL PERSON

Their current role, goal and reason to consider a second service.

MAKE THE HANDOFF USEFUL

A relevant invitation, consent and a clear next action—not just a menu link.

SHOW VALUE ON BOTH SIDES

Explain what the person gains and what the recipient or service gains.

15 proposed bridges · 2 complete journeys · role boundaries · implementation priorities

A Quran teacher chooses a second way to serve

Learning centre → voluntary support participation → a subject-relevant offer a seeker can assess.

01

Teacher’s reason

“I want to use my Quran expertise to support someone beyond a scheduled class.”

02

Bridge experience

Invite the teacher to offer Quran support; reuse consented expertise and complete volunteer checks.

03

Seeker’s reason

“This approved volunteer is also an approved Quran teacher. I can see why the match is relevant.”

DOES EVERY TEACHER NEED VOLUNTEERING?

No. It becomes relevant when they choose to offer support.

WHAT DOES THE TEACHER BADGE MEAN?

Relevant approved expertise—not guaranteed safety or automatic case access.

How the user journeys connect

Read each row as a reason to move between services. Select an outlined card to explore its bridge.

TEACHER	**Teach a topic** Already using learning	**Offer relevant help** Opt in + volunteer approval	**Support a seeker** Relevant credentials visible
VOLUNTEER	**Identify a skill gap** A real duty needs preparation	**Take useful training** Assess readiness separately	**Return to service** Approved for suitable work
SEEKER	**Ask for guidance** Learning need is expressed	**Choose a suitable class** Consent + language + level	**Request continuity** Optional mentoring
LEARNER	**Discover a programme** From an approved topic	**Build confidence** Learn at their chosen pace	**Choose to contribute** Apply separately to volunteer
MRM TEAM	**See aggregate demand** Protect individual identities	**Commission learning** Match teachers to a real gap	**Refer willing people** Measure usefulness, not pressure

A connection is useful only when the person needs it

Feature completeness does not require forcing every person through every service.

YES—WHEN THERE IS A REAL REASON

A teacher wants to contribute; a volunteer needs preparation; a seeker asks for learning help.

NO—WHEN THE SECOND SERVICE ADDS NO VALUE

A teacher only wants to teach; a reader only wants Quran; a seeker needs immediate practical help.

Relevant invitation

Why this action, for this person, at this point?

Voluntary transition

Can they decline without losing their original service?

Useful context

What chosen information saves them from starting again?

Bounded authority

Which new checks apply before the next role or record opens?

A teacher can turn expertise into relevant care

Learning centre → Volunteer support | An approved Quran teacher

“I teach Quran. I would also like to help someone who needs personal guidance.”

USE WHEN

Offer volunteering when the teacher wants to give support beyond scheduled classes.

NOT REQUIRED WHEN

A teacher may only publish and teach. Volunteering stays optional.

01

Teaching profile

Approved topics and languages establish relevant expertise.

02

Choose to help

An invitation offers Quran-related support; the teacher opts in.

03

Volunteer approval

MRM checks suitability, training, capacity and case boundaries.

04

Relevant support match

The seeker sees approved teaching credentials and accepts the offer.

CARRY FORWARD

With consent: approved teacher status, verified subject, languages and public profile.

KEEP SEPARATE

Teacher payment does not buy case access. No private student records are shared.

VALUE ON BOTH SIDES

The seeker can judge relevant expertise; the teacher gains a meaningful way to serve. Credentials support confidence, not a guarantee of safety.

SUCCESS: Eligible teachers opting in → approved volunteers → accepted subject-relevant matches.

A volunteer can learn before accepting a new task

Volunteer support → Learning centre | A volunteer offered unfamiliar work

“I want to help, but I need preparation for this kind of support.”

USE WHEN

Recommend an approved course when a real duty requires a skill or refresher.

NOT REQUIRED WHEN

Existing qualified volunteers do not repeat irrelevant classes; no blanket course requirement.

01

Readiness gap

The volunteer or coordinator identifies a specific skill gap.

02

Relevant training

Open the approved course with topic and required outcome explained.

03

Learning evidence

Record completion; assess readiness separately where needed.

04

Return to duty

MRM updates eligibility and offers suitable work after approval.

CARRY FORWARD

Course reference, completion and separately assessed competencies, with appropriate visibility.

KEEP SEPARATE

Completion alone is not volunteer approval. Private learning notes stay private.

VALUE ON BOTH SIDES

Volunteers get practical preparation; seekers receive help from people approved for the task.

SUCCESS: Training completion → assessed readiness → eligible task acceptance; monitor support quality.

A support conversation can open the right learning path

Support requests → Learning centre | A seeker asking for Quran-reading help

“I need a patient beginner class, in my language, at a time I can attend.”

USE WHEN

Suggest a class when learning addresses the person’s expressed need and they want it.

NOT REQUIRED WHEN

Urgent welfare support continues independently. No class enrolment is required for aid.

01

Expressed need

The assigned helper asks whether learning support would be useful.

02

Consent to refer

The seeker selects a goal, language and availability to share.

03

Suitable programme

Show approved beginner classes and relevant teacher credentials.

04

Optional enrolment

The seeker joins; the helper sees only the agreed referral status.

CARRY FORWARD

Chosen learning goal, language, availability and referral ID; share only what is needed.

KEEP SEPARATE

No full case narrative, financial circumstances or private chat enters a teacher profile.

VALUE ON BOTH SIDES

The seeker receives a practical next step; teachers reach learners who want the programme.

SUCCESS: Consented referrals → suitable enrolments → attendance and seeker-reported usefulness.

A Quran reader can find help for a specific learning goal

Quran utility → Learning centre | A person using Quran reading tools

“I can read this passage, but I want help with pronunciation or meaning.”

USE WHEN

Offer a discreet learning action after the person explicitly asks for help on a topic.

NOT REQUIRED WHEN

Reading alone remains complete. Do not infer poor skill or send unsolicited judgments.

01

Ask for guidance

The reader chooses Learn this topic or Get reading help.

02

Choose learning goal

They select beginner reading, recitation or an approved topic.

03

Relevant discovery

Show approved teachers or programmes matching language and level.

04

Return to practice

After learning, a saved link returns to the selected passage.

CARRY FORWARD

Only the user-selected passage, learning goal and preferred language.

KEEP SEPARATE

No private reading history or worship-tracker record is shared with a teacher.

VALUE ON BOTH SIDES

Daily use can become purposeful learning; teachers receive clearer learner intent.

SUCCESS: User-initiated learning opens → relevant enrolments → return to chosen practice.

A learner can ask for continuity after a class

Learning centre → Mentoring | A learner who wants individual follow-up

“The class helped. I would like someone to guide my next steps.”

USE WHEN

Offer mentoring after a learner requests ongoing guidance or a teacher offers approved capacity.

NOT REQUIRED WHEN

Class enrolment does not enrol a person into mentoring or open private messaging automatically.

01

Request follow-up

The learner chooses a goal after the programme.

→

02

Available mentor

Show approved mentors relevant to topic, language and permitted boundaries.

→

03

Mutual acceptance

The mentor has capacity; the learner agrees to contact and expectations.

→

04

Ongoing guidance

Open the authorised relationship and optional agreed check-ins.

CARRY FORWARD

Chosen programme, learning goal and agreed availability; selected progress only with consent.

KEEP SEPARATE

No automatic access to class rosters, aid cases or private worship records.

VALUE ON BOTH SIDES

Learners gain continuity; mentors support people whose needs match their expertise.

SUCCESS: Follow-up requests → mutually accepted matches → useful agreed check-ins.

A mentor can refer needs beyond the teaching relationship

Mentoring → Support requests | A mentor hearing about a practical difficulty

“This learner needs help that I am not authorised or qualified to provide.”

USE WHEN

Offer a supported referral when the person wants help outside the mentor’s remit.

NOT REQUIRED WHEN

A mentor does not investigate welfare issues or browse existing private cases.

01

Recognise the limit

The mentor explains the relevant support route without promising an outcome.

02

Person chooses help

The learner opens or agrees to a minimal support referral.

03

MRM triage

Authorised staff assess urgency, eligibility and the appropriate response.

04

Bounded follow-up

The mentor sees only the referral status the person agreed to share.

CARRY FORWARD

Consent, chosen category, contact preference and minimum agreed context.

KEEP SEPARATE

No blanket case access. Safeguarding disclosures follow the approved escalation policy.

VALUE ON BOTH SIDES

The person reaches qualified help; the mentor can stay within a clear teaching role.

SUCCESS: Accepted referrals → triaged requests → completed handoffs without excess disclosure.

A learning event can invite a separate service role

Learning events → Volunteer duties | A Halaqa attendee or teacher

“I am attending this event. Can I help with registration or accessibility?”

USE WHEN

Offer clearly defined event tasks when organisers need capacity and the person opts in.

NOT REQUIRED WHEN

Attending a class never creates a duty. An event helper does not gain case access.

01

Event participation

The person views an approved programme and its support needs.

02

Choose a duty

They select a suitable task, time window and required checks.

03

Coordinator confirms

Check eligibility and avoid conflict with the person’s class time.

04

Event service

Show a separate duty card, instructions and attendance confirmation.

CARRY FORWARD

Event ID, chosen slot, contact consent and role-specific eligibility.

KEEP SEPARATE

Class attendance and duty acceptance are separate records; no attendee list is exported.

VALUE ON BOTH SIDES

Organisers gain willing capacity; participants have a specific, manageable way to contribute.

SUCCESS: Opt-in duty requests → conflict-free confirmations → completed event tasks.

An inspiring post can lead to a relevant programme

Community updates → Learning centre | A reader interested in an approved topic

“This article is useful. Where can I learn this with a teacher?”

USE WHEN

Attach a specific approved programme when it genuinely expands on the post.

NOT REQUIRED WHEN

Not every post needs a conversion. General announcements can stand alone.

01

Relevant approved post

An author explains a topic with a clear source and audience.

→

02

Purposeful invitation

Read programme details or Meet the teacher explains the next step.

→

03

Programme context

Open topic, level, language, date and access information.

→

04

Voluntary participation

The reader chooses enrolment and can return to the original post.

CARRY FORWARD

Post ID, topic and linked programme; aggregate referral attribution where agreed.

KEEP SEPARATE

No sensitive-case targeting, fabricated testimonials or automatic enrolment.

VALUE ON BOTH SIDES

Readers can act on genuine interest; teachers reach an appropriate audience.

SUCCESS: Post-to-programme opens → relevant enrolments; monitor usefulness and opt-outs.

Repeated support needs can shape better programmes

Support operations → Learning planning | An MRM programme coordinator

“We repeatedly receive beginner-learning requests in a language with little capacity.”

USE WHEN

Use restricted aggregate demand to commission a programme for an evidenced gap.

NOT REQUIRED WHEN

Do not publish identifiable case examples or infer demand from a tiny sensitive group.

01

Aggregate need

Authorised staff group agreed categories, languages and waiting demand.

→

02

Plan a response

MRM chooses a topic and suitable approved teacher capacity.

→

03

Publish programme

Create a public description without beneficiary identities.

→

04

Measure the response

Track programme capacity, consented referrals and unmet demand.

CARRY FORWARD

Only approved aggregate demand, programme requirements and non-identifying outcomes.

KEEP SEPARATE

Case files and individual identities never enter a public programme brief.

VALUE ON BOTH SIDES

Learning supply responds to real community needs; support teams gain a useful referral option.

SUCCESS: Demand gap → commissioned capacity → suitable referrals; review remaining unmet need.

A verified outcome can invite responsible participation

Service outcomes → Community updates | A beneficiary willing to share an experience

“I want to thank the programme, but I want control over what people can see.”

USE WHEN

Publish a verified, consented story with an appropriate participation destination.

NOT REQUIRED WHEN

Assistance and recognition never depend on agreeing to publicity.

01

Separate invitation

After service, staff offer an optional story process with no effect on aid.

02

Specific consent

Agree wording, images, visibility and the withdrawal process.

03

Review and publish

Check accuracy, minimisation and moderation before publication.

04

Relevant invitation

Readers can discover a real class or apply to volunteer.

CARRY FORWARD

Only approved story assets and programme links under the documented consent.

KEEP SEPARATE

No case narrative, identity number or location is copied by default; no guaranteed outcomes.

VALUE ON BOTH SIDES

The storyteller controls disclosure; readers see credible reasons to participate.

SUCCESS: Consent compliance, correction requests and relevant participation; never reward forced stories.

A local utility can surface a genuinely useful gathering

Prayer / nearby places → Learning events | A person checking prayer times or a mosque

“Is there an approved beginner Halaqa near this place?”

USE WHEN

Offer nearby programmes when the person requests local learning information.

NOT REQUIRED WHEN

Prayer times remain usable without events, location sharing or an account where supported.

01

Local intent

The person selects a mosque or manually chosen area.

02

Explore gatherings

A separate action requests approved programmes nearby.

03

Check relevance

Show venue, date, topic, language and accessibility information.

04

Choose to attend

The person enrols and optionally enables programme reminders.

CARRY FORWARD

Selected venue or area and chosen programme; prefer manual area selection when sufficient.

KEEP SEPARATE

No background location tracking or attendance inference from prayer-tool use.

VALUE ON BOTH SIDES

Daily tools create relevant discovery; local organisers reach interested participants.

SUCCESS: User-requested local discovery → suitable event enrolments → confirmed attendance.

A learner can choose a path from participation to contribution

Learning participation → Volunteer application | A learner who wants to give back

“This helped me. I want to support others when I am ready.”

USE WHEN

Offer an optional volunteer path after the person expresses interest in contributing.

NOT REQUIRED WHEN

Learning progress, religiosity or aid receipt never creates an obligation to volunteer.

01

Interest in service

The learner chooses a suitable contribution area.

02

Relevant preparation

Show actual role expectations and optional or required preparation.

03

Apply and assess

Reuse consented profile details; complete separate volunteer checks.

04

Start within limits

Approved volunteers accept bounded work with coordinator support.

CARRY FORWARD

Selected interests, contact details and relevant assessed skills with consent.

KEEP SEPARATE

A certificate, course attendance or worship streak does not confer service authority.

VALUE ON BOTH SIDES

Learners gain an achievable contribution route; MRM grows prepared, willing capacity.

SUCCESS: Interest → applications → approvals → sustained suitable service; watch burden and dropout.

A volunteer can connect a person to the right specialist

Volunteer support → Specialist referral | A volunteer whose assigned case exceeds their remit

“I can accompany this person, but their next need requires authorised expertise.”

USE WHEN

Route through MRM when a need exceeds the volunteer’s approved competence.

NOT REQUIRED WHEN

The app never treats a teaching badge as legal, medical or financial accreditation.

01

Recognise a boundary

The volunteer records a minimal referral request on their authorised case.

02

Staff review

MRM checks consent, urgency and the appropriate referral pathway.

03

Approved handoff

Share necessary information with an authorised partner under policy.

04

Keep continuity

Track acknowledgement and next ownership; the volunteer sees permitted status.

CARRY FORWARD

Minimum agreed referral context, consent and case/reference ID to authorised recipients.

KEEP SEPARATE

No public case broadcast, unapproved partner access or assumption of specialist credentials.

VALUE ON BOTH SIDES

The seeker avoids repeating the story unnecessarily;
the volunteer avoids unsafe overreach.

SUCCESS: Appropriate referrals → acknowledged handoffs → clear next owner and follow-up.

Public discovery can continue into the same service journey

Website → App participation | A visitor reading a programme or volunteer opportunity

“I want this exact programme, not to start again on a generic home screen.”

USE WHEN

Preserve the public destination across install, sign-in and eligibility checks where feasible.

NOT REQUIRED WHEN

Public information stays accessible; installation is not needed just to read it.

01

Specific public page

The visitor chooses a programme, volunteer role or support route.

02

Keep the destination

Carry a non-sensitive link or short reference through entry.

03

Required checks only

Sign in or apply when the selected action requires it.

04

Resume the action

Return to the same programme or application with current availability.

CARRY FORWARD

Public destination ID and safe campaign/source reference; no private case data in URLs.

KEEP SEPARATE

No secrets in deep links. Expired programmes receive an honest alternative.

VALUE ON BOTH SIDES

Visitors keep their intent; MRM loses fewer people between discovery and participation.

SUCCESS: Destination retained → intended action completed; test installation and expired-link paths.

Service experience can guide a person’s next development step

Volunteer review → Learning development | A volunteer reflecting with a coordinator

“What did I do well, and what training would help me contribute better?”

USE WHEN

Use an agreed private review to recommend learning or future duties.

NOT REQUIRED WHEN

Do not convert volunteer hours or popularity into teaching approval or public expertise claims.

01

Review service

The volunteer and authorised coordinator reflect on a completed duty.

→

02

Agree development

Select a specific skill goal without copying beneficiary details.

→

03

Choose learning

Offer an approved course or mentor relevant to that goal.

→

04

Assess progression

Review learning and suitability before any new responsibility.

CARRY FORWARD

Agreed skill goal and restricted competency evidence; public recognition only by policy.

KEEP SEPARATE

No beneficiary story or private feedback on public profiles; no automatic teacher badge.

VALUE ON BOTH SIDES

Volunteers see a development path; MRM builds capacity with evidence rather than rank.

SUCCESS: Agreed plans → useful training → assessed competence; track wellbeing as well as retention.

Teacher journey: teaching becomes an optional way to serve

One account can support two approved roles. The person chooses whether to use both.

01

Arrive to teach

Apply through the learning centre.

02

Approved expertise

MRM approves subject and teacher status.

03

Optional invitation

“Would you like to offer support in Quran?”

04

Apply as volunteer

Agree availability and complete separate checks.

05

Relevant match

A permitted offer shows approved expertise.

06

Accepted support

Seeker accepts; limited case access opens.

07

Continue or pause

Teacher controls capacity; coordinator reviews outcomes.

No volunteering? Teaching continues normally.

Seeker journey: support can open a chosen learning path

Learning complements assistance when useful. It is never a condition for receiving help.

01

Ask for help

A seeker requests beginner Quran guidance.

02

Appropriate helper

MRM matches an approved volunteer; teacher expertise may be relevant.

03

Choose learning

The seeker accepts an optional referral.

04

Suitable programme

Topic, level, language and timing match the chosen goal.

05

Learn and follow up

Attend; request mentoring only if useful.

06

Continue independently

Return to Quran tools and the selected practice.

07

Contribute if desired

A later volunteer application remains separate and optional.

Declines learning? Support stays available under normal eligibility.

Build the strongest bridges first

Sequence by user value and dependence on agreed policy—not by drawing the largest possible network.

FIRST

Clear service handoffs and role boundaries

05 Learning centre → Volunteer support

06 Volunteer support → Learning centre

07 Support requests → Learning centre

10 Mentoring → Support requests

17 Volunteer support → Specialist referral

18 Website → App participation

NEXT

Relevant discovery and development paths

08 Quran utility → Learning centre

09 Learning centre → Mentoring

11 Learning events → Volunteer duties

12 Community updates → Learning centre

13 Support operations → Learning planning

16 Learning participation → Volunteer application

LATER

Needs stronger operational evidence or consent design

14 Service outcomes → Community updates

15 Prayer / nearby places → Learning events

19 Volunteer review → Learning development

Reuse helpful context; grant each role separately

One person can be a learner, teacher and volunteer. Each relationship still has its own approval and permissions.

ONE PERSON

Reuse an account and consented profile details. Do not create a new identity for every feature.

SEPARATE ROLES

Teacher approval, publishing entitlement and volunteer eligibility are independent states.

EXPLICIT RELATIONSHIPS

An enrolment, mentor acceptance, duty confirmation or case assignment gives a bounded relationship.

VISIBLE RELEVANCE

Show approved subject expertise and status on a support offer—not private learning or worship records.

CONTROLLED CONTEXT

Carry selected goals, public programme IDs or referral status. Record who consented to what.

SAFE EXIT AND RETURN

Decline, pause or leave the second journey without losing the original service; handle revoked roles.

Validate that each bridge earns its place

Agree the product behaviour, then test it with the people who would actually cross between services.

PRODUCT DECISIONS

Confirm visible teacher credentials, volunteer checks, invitation timing, referral ownership and consent wording.

USER VALUE TEST

Can a teacher, volunteer or seeker explain why the suggested second service helps—and decline it easily?

MEANINGFUL FLOW TESTS

Declining keeps teaching available. Payment grants no case access. Revoked credentials stop appearing as current. Expired links recover honestly.

RECIPROCAL OUTCOME

Measure appropriate accepted handoffs and user-reported usefulness. Do not optimise pressure to enrol, volunteer or disclose.

A connected platform helps a person take the right next step for their goal.
